

CCP Mobile View Documentation Template

Make a copy of this document

(In most cases I would expect one sentence for each item. Tell peers what page to find the code for grid, how you are indicating the current page, etc.)

Your name:

Link to your deployed site:

Link to your Github repository:

Reminder: This should be in a new repo called `ccp_mobile_w24`.

(There shouldn't be any capital letters in your repo name. You can use the same repo as for your ccp html submission.)

- 1) Do you have all four pages that are linked via a common navigation bar? Does the order of the navigation elements stay the same on all four pages?
- 2) Does each page have a unique title?
- 3) Does each page have a "Skip to Main Content" link that is currently not shown?
- 4) How do you indicate the current page **within** the links in the navigation? *(Make sure you are not using just color.)*
- 5) Is the font big enough to let me click on each link from a mobile device? (Check it on an actual mobile device.)
- 6) What elements use grid and which pages are these elements on? What did you have to change to your code to get the grid property to work?

- 7) Did you use Inspect Element to check that removing display: grid changes the layout of the page? (Include screenshot if desired.)
- 8) Did you include media queries to ensure that any gifs or other animation are not displayed when the user prefers reduced-motion?
- 9) What did you do to make your pages particularly visually appealing? How did you come up with your color scheme? Tell us more about your font choices, image editing, etc. I am sure there are things that you did that we can't easily see. I would expect to see a bulleted list of at least 8 things.

Make sure that you checked your site ON A PHONE. We are looking for how it looks on a small screen.

- 10) Validation - Include screenshots of your page validating on aXe, Wave, and the W3 validator.
 - a) If you have errors that you don't think should count against your grade, include documentation.
 - b) You need to include 12 screenshots in total
- 11) Check your site for other issues. Are you using the reset style stylesheet? Did you remember to include the viewport meta tag? Do you have console errors? Did you use proper naming conventions (no uppercase letters or spaces, mnemonic file names, etc.)
- 12) Double check your website against the grading rubric in Canvas!
